RAND

Rolled out eCopy ShareScan, Nuance's workflow and document automation system

## INDUSTRY LEADING MPS AND WORKFLOW SOLUTIONS

Following seven years of first class print support and regular recommendations - Aura worked with Imaging Solutions specialist Nuance to refresh the Mizuho International fleet. All the floor standing MFPs were replaced with more suitable technology and the unnecessary desktop printers were reduced, producing cost savings. Along with Nuance's secure print solution SafeCom, its secure scanning solution, AutoStore, was added to the fleet. This enables all documents scanned to not only go straight to email, but also directly into the business-wide server and folder system. Mizuho Bank and International now have a combined and truly bespoke print and document management solution. Enabled by leading technology from Nuance and other vendor-neutral recommendations from Aura, the One Mizuho solution has helped the business regain control of their print and document processes. Through this visibility, the businesses can better understand the flow of documents around their organisations. Armed with this knowledge, they can make smart changes to gain greater productivity and invaluable cost containment.

Aura's remit became part of the 'One Mizuho' ethos!

Mizuho Bank have approximately 850 staff in London, the largest of Mizuho Bank's offices in Europe, Middle East and Africa as part of a leading Global bank providing financial service solutions and have been working with Aura since 2007.
