

Aura™

ENHANCED PATIENT- CENTRICITY

In October 2016, Aura conducted a free consultation and print audit, knowing that document security would be a particularly vital consideration.

Upgraded entire
print fleet

110 fewer printers
across all sites

Reduced paper, toner
and power waste

HEIGHTENED SECURITY WITHIN HEALTHCARE

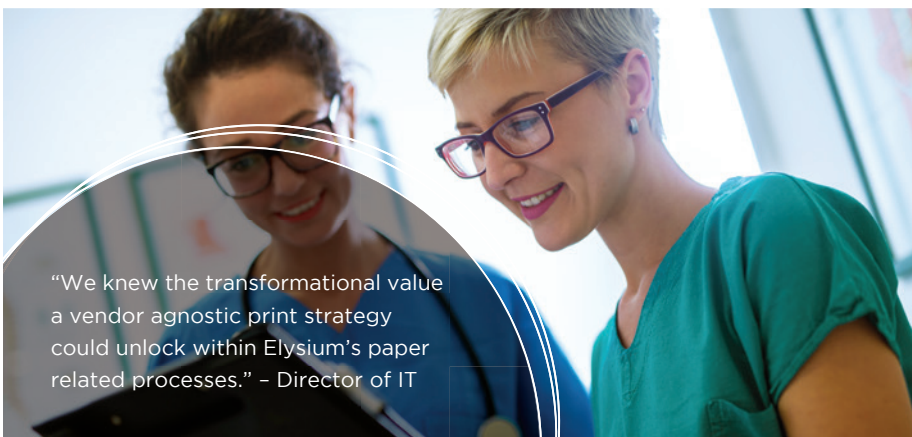

With a focus on document security, Aura developed a bespoke print and document management solution for Elysium, with a vision to provide a safer way to share and store documents, reduce resource consumption, and ultimately improve their bottom line.

As a vendor agnostic solutions supplier, Aura helped Elysium's IT team objectively realise that Kyocera technology remained the best option for the refreshed fleet; then recommended machines to complement each hospital team's differing needs.

Starting in March 2017, the approved solution was up and running across all sites within four months and included:

- Upgrades to Elysium's entire print fleet (integrating any newer machines purchased in 2015)
- Reducing the number of machines across all sites from 272, down to 162
- Reducing paper, toner and power waste

Elysium has access to the personal data of hundreds and thousands of people, including current patients so it was an organisational must for Aura to create a solution that would safeguard confidential information. Introducing secure, follow me print functionality established document and data security on the print network.

"We knew the transformational value a vendor agnostic print strategy could unlock within Elysium's paper related processes." - Director of IT

With over twenty locations across the UK, Elysium Healthcare believe in a patient centric approach to the delivery of care and all aspects of hospital life.

The business and new private healthcare brand launched at the end of November 2016.
