

Aura™

ADVANCED SECURE PRINT SOLUTION

In order to become more secure around documents, this leading healthcare group came to Aura to design and implement a new secure MPS solution.

Consolidation of more
energy-efficient
print devices

Fully secure
document printing
on a 'cost-per-impact' basis

Greatly improved quality,
speed and finishing
capability

A SECURE PRINT SOLUTION FOR THE FUTURE

A leading healthcare group, with a portfolio award-winning private hospitals, specialist clinics, outpatients and diagnostics centres, as well as private GP services, spread across London and Manchester, this client also partners with leading NHS Trusts.

When a healthcare organisation has access to the personal data of thousands of patients, security is paramount. Aura improved the group's print security processes with 'Pull-Print' software - allowing users to release their print job from any

enabled output device, by using a password. Print jobs are held securely until the user is ready to release them. This helps to protect the data and allows users to have a flexible and easy printing environment.

The fleet replacement took ten months to roll out and service benefits were realised immediately. Regular 'in-contract' account and service reviews are in place to identify further opportunities for cost reduction and paper efficiencies, because when a business like this prints less, it can do more.

"The strategic sourcing exercise was designed to deliver the maximum possible savings. Aura's commercial proposal provided us with the best all round value and we were very pleased with the way they implemented the transition programme."

Director of Purchasing and Materials Management
